

APPLICATION NOTES

March 1996

Wiring the Interrogator Module to the Commander 2000 and LifeGuard

This application note shows how to wire the Interrogator™ Module to the Commander 2000™ control panel (60-437) and LifeGuard™ Personal Emergency Response System (60-626). If you connect the wiring as shown in figure 1, the panel siren won't sound when the Interrogator Module is active. When the Interrogator Module is active, exterior sirens connected to the Commander 2000 or LifeGuard are disabled. The speaker attached to the Interrogator Module (terminals 16 and 17) provides voice for Interrogator operation, but it does not produce status or alarm messages during normal operation.

Note: Turn feature numbers 20 (F20) and 27 (F27) ON when connecting the Commander 2000 or LifeGuard to the Interrogator Module.
